# **Energy performance certificate** (EPC)

17, Cairn Gardens CRUMLIN BT29 4UZ	Energy rating	Valid until: Certificate number:	10 January 2029 0519-4000-0249-7801-3910
Property type			

Mid-terrace house

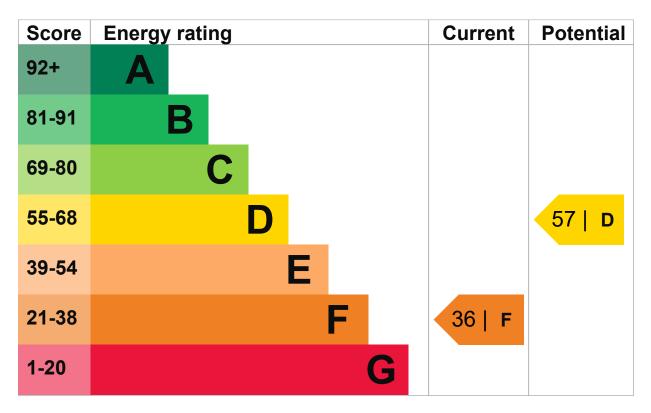

# **Total floor area**

80 square metres

# Energy efficiency rating for this property

This property's current energy rating is F. It has the potential to be D.

See how to improve this property's energy performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be. https://find-energy-certificate.digital.communities.gov.uk/energy-certificate/0519-4000-0249-7801-3910

For properties in Northern Ireland:

- the average energy rating is D
- the average energy score is 60

#### Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Cavity wall, as built, no insulation (assumed)	Poor
Roof	Pitched, 150 mm loft insulation	Good
Window	Fully double glazed	Average
Main heating	Boiler and radiators, oil	Average
Main heating control	Programmer, room thermostat and TRVs	Good
Hot water	From main system, no cylinder thermostat	Poor
Lighting	No low energy lighting	Very poor
Floor	Solid, no insulation (assumed)	N/A
Secondary heating	Room heaters, dual fuel (mineral and wood)	N/A

# Primary energy use

The primary energy use for this property per year is 371 kilowatt hours per square metre (kWh/m2).

What is primary energy use?

# **Additional information**

Additional information about this property:

· Cavity fill is recommended

## Environmental impact of this property

#### Energy performance certificate (EPC) - Find an energy certificate - GOV.UK

One of the biggest contributors to climate change is carbon dioxide (CO2). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

# An average household produces

6 tonnes of CO2

# This property produces

7.5 tonnes of CO2

# This property's potential production

# 5.0 tonnes of CO2

By making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 2.5 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

#### How to improve this property's energy performance

Making any of the recommended changes will improve this property's energy efficiency.

Potential energy If you make all of the recommended changes, this will improve the property's energy rating and score from F (36) to D (57). rating What is an energy rating? **Recommendation 1: Cavity wall insulation** Cavity wall insulation Typical installation cost £500 - £1,500 Typical yearly saving £202 Potential rating after carrying out recommendation 1 46 | E **Recommendation 2: Hot water cylinder insulation** Increase hot water cylinder insulation Typical installation cost £15 - £30 Typical yearly saving £25 Potential rating after carrying out recommendations 1 and 2 48 | E **Recommendation 3: Low energy lighting** 

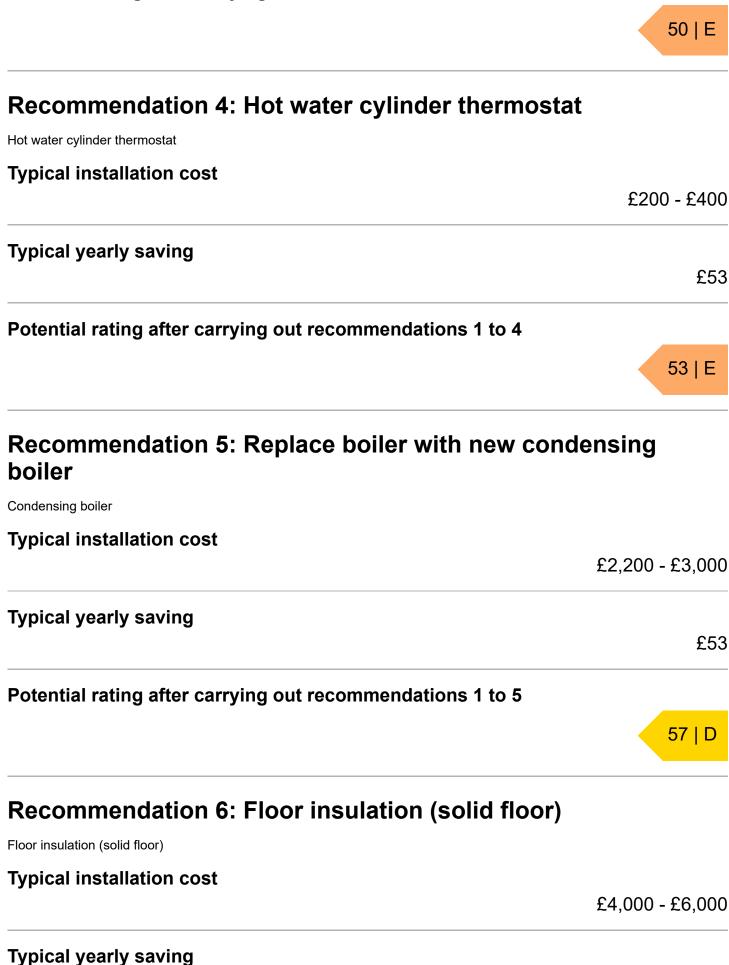

Low energy lighting

Typical installation cost

# Typical yearly saving

£50

# Potential rating after carrying out recommendations 1 to 3

5/8

# Potential rating after carrying out recommendations 1 to 6

Potential rating after carrying out recommendations 1 to 6	59   D
Recommendation 7: Solar water heating	
Solar water heating	
Typical installation cost	£4,000 - £6,000
Typical yearly saving	£38
Potential rating after carrying out recommendations 1 to 7	
	62   D
Recommendation 8: Solar photovoltaic panels, 2.5 I	kWp
Solar photovoltaic panels	
Typical installation cost	
	£5,000 - £8,000
Typical yearly saving	
	£292
Potential rating after carrying out recommendations 1 to 8

Paying for energy improvements	
Find energy grants and ways to save energy in your home. (https://www.gov.uk/improve-energy-efficiency)	
Estimated energy use and potential savings	
Estimated yearly energy cost for this property	£1169
Potential saving	

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The estimated saving is based on making all of the recommendations in how to improve this property's energy performance.

# Heating use in this property

Heating a property usually makes up the majority of energy costs.

# Potential energy savings by installing insulation

The assessor did not find any opportunities to save energy by installing insulation in this property.

#### Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
