| 16 Beresford Hill DROMORE BT25 1HQ | Energy rating | Valid until: 9 January 2032 Certificate number: 6200-6406-0622-0191-3923 | |
| Property type | | Detached house | |
| Total floor area | | 99 square metres | |

Energy efficiency rating for this property

This property's current energy rating is D. It has the potential to be D.

<u>See how to improve this property's energy</u> performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in Northern Ireland:

the average energy rating is D the average energy score is 60

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

| Feature | Description | Rating |
|----------------------|--|-----------|
| Wall | Cavity wall, as built, insulated (assumed) | Good |
| Roof | Pitched, 200 mm loft insulation | Good |
| Window | Fully double glazed | Average |
| Main heating | Boiler and radiators, oil | Average |
| Main heating control | Programmer, room thermostat and TRVs | Good |
| Hot water | From main system | Average |
| Lighting | Low energy lighting in all fixed outlets | Very good |
| Floor | Solid, insulated (assumed) | N/A |
| Secondary heating | Room heaters, dual fuel (mineral and wood) | N/A |

Primary energy use

The primary energy use for this property per year is 206 kilowatt hours per square metre (kWh/m2).

| Environmental imp property | act of this | This property produces | 5.2 tonnes of CO2 |
|---|----------------------|---|---------------------------------------|
| This property's current env rating is E. It has the poten | • | This property's potential production | 4.8 tonnes of CO2 |
| Properties are rated in a so based on how much carbo produce. | n dioxide (CO2) they | By making the <u>recommend</u> could reduce this property's 0.4 tonnes per year. This w environment. | s CO2 emissions by |
| Properties with an A rating | produce less CO2 | | |
| than G rated properties. An average household produces | 6 tonnes of CO2 | Environmental impact ratin assumptions about average energy use. They may not consumed by the people liv | e occupancy and reflect how energy is |

How to improve this property's energy performance

Making any of the recommended changes will improve this property's energy efficiency.

If you make all of the recommended changes, this will improve the property's energy rating and score from D (63) to D (65).

| Recommendation | Typical installation cost | Typical yearly saving |
|------------------------------|---------------------------|-----------------------|
| 1. Condensing boiler | £2,200 - £3,000 | £46 |
| 2. Solar water heating | £4,000 - £6,000 | £40 |
| 3. Solar photovoltaic panels | £3,500 - £5,500 | £324 |

Paying for energy improvements

Find energy grants and ways to save energy in your home. (https://www.gov.uk/improve-energy-efficiency)

| Estimated energy | use | and |
|-------------------------|-----|-----|
| potential savings | | |

| Estimated yearly energy cost for this property | £850 |
|---|------|
| Potential saving | £46 |

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property. The estimated saving is based on making all of the recommendations in <u>how to improve this</u> <u>property's energy performance</u>.

Heating use in this property

Heating a property usually makes up the majority of energy costs.

Potential energy savings by installing insulation

The assessor did not find any opportunities to save energy by installing insulation in this property.

Contacting the assessor and accreditation scheme

This EPC was created by a gualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
