Energy performance certificate (EPC)

20, Cairn Terrace CRUMLIN BT29 4UY	Energy rating	Valid until: Certificate number:	14 February 2023 0899-7908-0280-6682-0944
Property type end-terrace house			

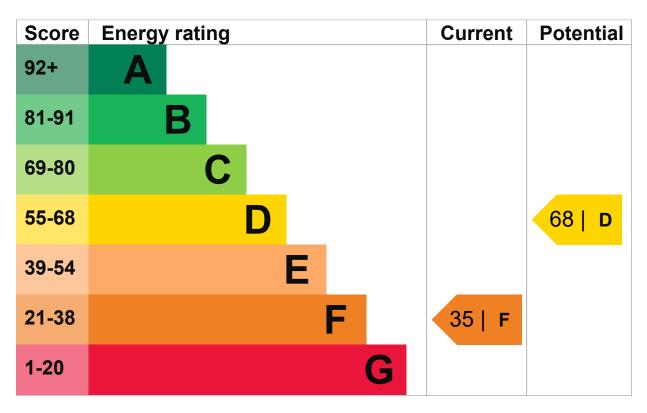

Total floor area

70 square metres

Energy efficiency rating for this property

This property's current energy rating is F. It has the potential to be D.

See how to improve this property's energy performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

For properties in Northern Ireland:

- the average energy rating is D
- the average energy score is 60

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Cavity wall, as built, no insulation (assumed)	Poor
Wall	Timber frame, as built, partial insulation (assumed)	Average
Roof	Pitched, 50 mm loft insulation	Poor
Roof	Flat, limited insulation (assumed)	Very poor
Window	Partial double glazing	Poor
Main heating	Boiler and radiators, oil	Average
Main heating control	Programmer, no room thermostat	Very poor
Hot water	From main system, no cylinder thermostat	Very poor
Lighting	Low energy lighting in 50% of fixed outlets	Good
Floor	Solid, no insulation (assumed)	N/A
Secondary heating	Room heaters, electric	N/A

Primary energy use

The primary energy use for this property per year is 429 kilowatt hours per square metre (kWh/m2).

What is primary energy use?

Additional information

Additional information about this property:

• Cavity fill is recommended

Environmental impact of this property

One of the biggest contributors to climate change is carbon dioxide (CO2). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

An average household produces

6 tonnes of CO2

This property produces

7.3 tonnes of CO2

This property's potential production

3.5 tonnes of CO2

By making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 3.8 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

Potential energy

rating

How to improve this property's energy performance

Making any of the recommended changes will improve this property's energy efficiency.

If you make all of the recommended changes, this will improve the property's energy rating and score from F (35) to D (68).

Increase hot water cylinder insulation

Typical installation cost

£15 - £30

<u>Vhat is an energy rating?</u>	
commendation 1: Increase loft insulation to mm	D
se loft insulation to 270 mm	
cal installation cost	
	£100 - £350
cal yearly saving	
	£62.89
ential rating after carrying out recommendation 1	
	38 F
commendation 2: Cavity wall insulation	
wall insulation	
cal installation cost	
	£500 - £1,500
cal yearly saving	
	£194.51
ential rating after carrying out recommendations 1 and 2	
	45 E
commendation 3: Hot water cylinder insulation	

Typical yearly saving

	£58.29
Potential rating after carrying out recommendations 1 to 3	
	48 E
Recommendation 4: Draught proofing	
Draught proofing	
Typical installation cost	
	£80 - £120
Typical yearly saving	
	£24.24
Potential rating after carrying out recommendations 1 to 4	
	49 E
Recommendation 5: Low energy lighting	
Low energy lighting	
Typical installation cost	
	£25
Typical yearly saving	
	£14.73
Potential rating after carrying out recommendations 1 to 5	
	49 E
Recommendation 6: Hot water cylinder thermosta	t
Hot water cylinder thermostat	
Typical installation cost	

Typical installation cost

£200 - £400

Potential rating after carrying out recommendations 1 to 6

Recommendation 7: Heating controls (room thermostat and TRVs)

Heating controls (room thermostat and TRVs)

Typical installation cost

	£350 - £450
Typical yearly saving	
	£174.12
Potential rating after carrying out recommendations 1 to 7	
	59 D

Recommendation 8: Replace boiler with new condensing boiler

Condensing boiler

Typical installation cost

£2,200 - £3,000

Typical yearly saving	
	£204.52

Potential rating after carrying out recommendations 1 to 8

68 D	

Recommendation 9: Solar water heating

Solar water heating

Typical installation cost

		~~,~~~
Typical yearly saving		050.00
		£52.82
Potential rating after carrying out recommendations 1 to 9		
		70 C
Recommendation 10: Double glazed windows		
Replace single glazed windows with low-E double glazed windows		
Typical installation cost		
	£3,300	- £6,500
Typical yearly saving		
		£27.76
Potential rating after carrying out recommendations 1 to 10		
		71 C
Recommendation 11: Solar photovoltaic panels,	2.5 kWp	
Solar photovoltaic panels		
Typical installation cost		
	£9,000 -	£14,000
Typical yearly saving		
		£212.86
Potential rating after carrying out recommendations 1 to 11		
		83 B
Paying for energy improvements

Estimated energy use and potential savings

https://find-energy-certificate.digital.communities.gov.uk/energy-certificate/0899-7908-0280-6682-0944

Estimated yearly energy cost for this property

Potential saving

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The estimated saving is based on making all of the recommendations in how to improve this property's energy performance.

Heating use in this property

Heating a property usually makes up the majority of energy costs.

Potential energy savings by installing insulation

The assessor did not find any opportunities to save energy by installing insulation in this property.

Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
