# **Energy rating and score**

This property's energy rating is C. It has the potential to be C.

See how to improve this property's energy efficiency.

The graph shows this property's current and potential energy rating.

Properties get a rating from A (best) to G (worst) and a score. The better the rating and score, the lower your energy bills are likely to be.

- For properties in Northern Ireland:
  - the average energy rating is D
- the average energy score is 60

### Breakdown of property's energy performance

# Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition.

Assumed ratings are based on the property's age and type. They are used for features the assessor could not inspect.

| Feature              | Description                                 | Rating |
|----------------------|---|--------|
| Wall                 | Cavity wall, as built, insulated (assumed)  | Good   |
| Roof                 | Pitched, 150 mm loft insulation             | Good   |
| Window               | Fully double glazed                         | Good   |
| Main heating         | Boiler and radiators, mains gas             | Good   |
| Main heating control | Programmer, room thermostat and TRVs        | Good   |
| Hot water            | From main system                            | Good   |
| Lighting             | Low energy lighting in 55% of fixed outlets | Good   |
| Floor                | Solid, insulated (assumed)                  | N/A    |
| Secondary heating    | Room heaters, electric                      | N/A    |

#### Primary energy use

The primary energy use for this property per year is 163 kilowatt hours per square metre (kWh/m2).

About primary energy use

# How this affects your energy bills

An average household would need to spend £646 per year on heating, hot water and lighting in this property. These costs usually make up the majority of your energy bills.

You could **save £30 per year** if you complete the suggested steps for improving this property's energy rating.

This is **based on average costs in 2022** when this EPC was created. People living at the property may use different amounts of energy for heating, hot water and lighting.

# Impact on the environment

This property's environmental impact rating is C. It has the potential to be C. Properties get a rating from A (best) to G (worst) on how much carbon

dioxide (CO2) they produce each year. **Carbon emissions** 

# An average household produces

2.4 tonnes of CO2 This property produces This property's potential production 2.3 tonnes of CO2 You could improve this property's CO2 emissions by making the suggested

6 tonnes of CO2

£25

£30

£348

86 B

changes. This will help to protect the environment. These ratings are based on assumptions about average occupancy and energy use. People living at the property may use different amounts of

energy.

### Changes you could make ▶ Do I need to follow these steps in order?

Step 1: Low energy lighting

#### Typical installation cost Typical yearly saving

Potential rating after completing 74 C step 1 Step 2: Solar water heating £4,000 - £6,000

#### Typical installation cost Typical yearly saving

Typical yearly saving

steps 1 to 3

Potential rating after completing

£28 Potential rating after completing 76 C steps 1 and 2 Step 3: Solar photovoltaic panels, 2.5 kWp £3,500 - £5,500 Typical installation cost

### Help paying for energy improvements You might be able to get a grant from the **Boiler Upgrade Scheme**. This will

help you buy a more efficient, low carbon heating system for this property.

# **Contacting the assessor**

Who to contact about this certificate

### If you're unhappy about your property's energy assessment or certificate, you can complain to the assessor who created it.

assessor's accreditation scheme.
